I cloned my system disk using Acronis and that part was smooth. Actually, pretty straight forward. (I'm on XP pro Sp2).

I had to re-install my Unitor8 MkII (usb). Ok, no big deal even though the install process makes about as much sense as a monkey on crack. (Maybe I'm on crack and don't know it.)

Now the good part... clicking on the Paris Pro icon causes an immediate shutdown and re-boot. After re-boot, there's one of those microshaft error boxes saying the computer has recovered from a serious malfunction or whatever.

Before I go trying to do a complete re-install of Paris does anyone have a bit of advise on a possible alternative to a complete re-install? I'm using 1 MEC, 1 C-16, and 2 cards, Intel Mobo & CPU. This set up has been stable for years. Then again I don't do much heavy editing and tracking.

Thanks very much, Jim
