I cloned my system disk using Acronis and that part was smooth.
Actually, pretty straight forward. (I'm on XP pro Sp2).

I had to re-install my Unitor8 Mkll (usb). Ok, no big deal even though
the install process makes about as much sense
as a monkey on crack. (Maybe I'm on crack and don't know it.)

Now the good part... clicking on the Paris Pro icon causes an immediate
shutdown and re-boot. After re-boot,
there's one of those microshaft error boxes saying the computer has
recovered from a serious malfunction or whatever.

Before I go trying to do a complete re-install of Paris does anyone have
a bit of advise on a possible
alternative to a complete re-install? I'm using 1 MEC, 1 C-16, and 2
cards, Intel Mobo & CPU. This set up has been stable for
years. Then again I don't do much heavy editing and tracking.

Thanks very much, Jim
