---

I just picked up one of these sound modules for GM and do not have a manual. I cannot get it to produce a sound. It is receiving midi information but does not appear to be putting a signal out. I'm not sure I'm operating the thing correctly. Is there something simple I'm missing? If you have experience with this thing, shoot me an email, sending me your number and I'll give you a buzz, if you don't mind.

Thanks,  
Rich
