
Subject: Wild distortion during playback

Hello there Paris family,

I've almost got my Paris system running but for some reason, any audio I import is distorting during playback, even at unity.

When I try to use EQ, I also get heavy distortion.

I'm hoping this is a software problem but have a feeling it could be damage on my EDS cards, what do you think?

I can provide audio samples, if necessary. I should add that I only get the distortion during playback, when I render files, everything seems ok.

Any help would be massively appreciated.

Leigh
