explain to my why this is better to the point of ridiculing the other possibility? it's not that i'm a huge proponent of the other view, i just find the absolute dismissal of it quite funny given the acceptance of another theory to be soooooooo much more valid. please enlighten me.

Rich,

Did they miss this?

<http://www.newscientist.com/article/dn2059-giant-antarctic-ice-sheet-breaks-off.html>

Maybe it's growing on one side and melting on the other?

We're both gonna get busted now for posting this here. I was bad and now all the combatants have been banished to the general group. We terrorists can no

longer plant bombs here and create carnage amongst civilians.

;o)

;o)

Rick, the scientific way is to look at the data and make a determination. Validity is based on the scientific method and empirical data, not junk science. The jury is not out, Al Gore is far from being a scientist. There are over 400 real scientists who's studies dispute anthropogenic global warming and CO2 as the cause. I don't know about you but my car and boat use petrol and if the shmucks at the UN are pushing a certain view, with a political agenda, which affects the world economy and especially the US, and what I pay for gas, then my liberties are compromised. That's why I want the truth and so should you. I don't have a problem with new technologies that are environmentally friendly, if they work and if they are cheap and won't propagate the economic meltdown we're experiencing. One of the biggest farces out there is Bio Fuels. It takes about 4 times as much energy to produce ethanol than is liberated from its burning. And it's causing increases in the cost of corn which in turn has caused increases in everything that eats corn, i.e.. cows and omnivores. The government subsidizes its production which increases taxes on you and I. I'm tired of the bull, how about you?

Yes, you're right. I did hear about this. I think it's possible that ice on one side of the earth can be increasing while the other decreases. I suppose this has happened before in the many millennium's of the earth's climate history. The general group is just..... general. Right, we're gonna get busted and banned if this gets out of hand :-) Me a Paris terrorist?

rich, if you read the very first part of my post " it's not that i'm a huge proponent of the other view" then you would know that i'm not saying that global warming" is immanent. i would look at the evidence and make what i would hope to be an educated decision...right or wrong. however, i do find it a bit ludicrous to as many would suggest that we as humans (6 +billion) have no impact on the planets environment.

i fully believe and expect that the earth has it's own natural warming and cooling cycles. i also believe that we are affected by outside stellar influences (our sun being the nearest). and as stated above i believe that the 6+ billion of us do affect our surroundings; possibly more than the earth and all it's processes can overcome. i also do not see a problem with trying to live as responsibility as we can and if that means it costs us a little more to do so then so be it.

i'm already getting #ucked up the ass by the corp leaders who get paid 100's of millions of dollars to mismanage a company into the ground so what's a few more bucks spent to insure that my granddaughter and her children also have the opportunity to get the same @ucking? of all the things to complain about spending money on, i find their future as the absolute least objectionable. so i say, lets not spend it on the same old bullshit and spend it on something wothwhile...our...their future. we've spent trillions on how to destroy the planet, how about we spend some to..at the least...help it. i don't think that's a waste of money.

how about instead of the check box for donating money for a political party on the 1040 we have donate to alternative energy funding? or stop fathers from @ucking their daughters? or parents from killing their kids? you know, something useful rather than getting joe/debbie

whoever getting elected to do nothing but bitch about joe/debbie
whoever doing whatever they do and doing nothing but worrying about
getting reelected...now that's a @ucking waste of our money.

god, am i redundant or what???

When I went to look at this bass today I knew that if I didn't get it I
would die! ;^)

It's a Warwick, their import line, but nice. It has that Warwick growl.

Not getting rid of the Fender Jazz Special, mind you. But I've been
wanting a 5 string for a while.

Cheers,
-Jamie

Right now the basses are for recording - new CD in progress (s l o w l y progressing).

At gigs I'm still shredding on guitar and violin. The new fusion/prog band has me doing Dixie Dregs, Jeff Beck and UK/Holdsworth covers, plus originals that are even more shredderific. Definitely giving me a workout! Some of the tunes are mine, so I share the blame. :^)

By contrast I have a solo singer/songwriter concert coming up at Swallow Hill in April - mostly acoustic guitar and piano, maybe a little violin, maybe some other stuff. Come on up!

Cheers,
-Jamie

Hey, it was snowing pretty hard when I drove home from work last night . . .
late March . . . in Portland! Is it the coming Ice Age?

Here's a thought . . . is it possible that the Earth's natural warming and
cooling trends could override any effect that we humans have?

Or what if the Earth could actually respond to our efforts to warm it by
cooling itself triggered by some huge thermostatic mechanism?

Or wait . . . oh dear . . . what if the Earth is just a giant terrarium for
some highly advanced race of intergalactic aliens, and they're adjusting the
temperature before they harvest us for food? Bill . . . any help on this?
Where's my tin foil hat . . .?

Swallow Hill? That's where Aaron and I met up with John last May. When's the gig? We had a blast when we were up there. We even drove the wrong way on a freeway one night and we weren't even drunk.

Back in 1971 I went on an acid binge and when the paranoid phase of it kicked in, I was watching TV and Walter Cronkite was talking about nuclear testing and I decided that the free protons and other stuff that was caused by splitting atoms was going to affect other atoms and cause them to mutate and that eventually this would start affecting DNA molecules all over the earth, even with people who were thousands of miles away because it would be like a domino theory so as the paranoia grew, it became obvious that not only were we doing this here, but that our solar system was actually just an atom in a much larger molecule and that if we were doing this here, then it was probably happening in a parallel universe too and that it was just a matter of time before our sun which is nothing more than the nucleus of an atom was either going to split wide open because it was probably part of a uranium molecule. At that point I really got paranoid and it was nighttime so I went outside and started staring at the stars and suddenly I saw this big shooting star and I knew that this was a particle that was heading to split the sun and so I figured that since I was gonna die anyway, I'd write this theory all down so I rolled up a fattie and did just that while I waited for sunrise. Well, the world didn't end that morning and since I was a college student at the time and I had a paper due for my political science class and my prof was a real cool Korean dude named Dr. Kim and he hated the military industrial complex and nukes I took the paper to class, still trippin my butt off and turned it in as an essay and everyone looked at me funny and their faces were melting and there were rainbows crawling up the walls and lights shooting out of people's noses so I had to leave but this was the 70's, like I said and the next day everyone thought it was cool and Dr. Kim didn't look like the caterpillar in Through The Looking Glass and he told me how "imaginative" he thought I was so I felt better...I guess people back then thought this kinda stuff was normal.

You could have knocked me over with a feather when I saw this a few years ago.

Yikes! Glad you survived. It was nice of you guys to come out to see the
band I was playing with back then.

I'm doing a solo show at the legendary Swallow Hill Cafe on Thursday
April 24th. More info: www.JamieKruz.com/upcomingshows.html

If you make it I will buy you a beer. If Aaron makes it, I will buy you
a second beer so Aaron can better keep you under control. ;^)

If John makes it, I'll get off the stage and let him play! :^)

Dude, I think we were having our acid phases at the same time, though I
never had a "bad trip". I just laughed a lot and thought I was enlightened
until the next morning. :)

But I do remember that scene in "Men In Black." I ran it several times,
then a few more times in slow motion. Whoa. :)

Yep, I'm keeping the Fender, it has a great sound. Digging the Warwick,
too, and the 5 string/24 fret range.

Neither are fretless but my violin is, does that count? ;^)

Cool about your new bass. Did you say it's a Warwick, an import, nice. I dig that Warwick growl too. Don't ever get rid of the Fender Jazz, Jaco would be dissappointed. Are you playing fretless? Just got back from Miami, working on an arrangement for Othello Molineaux's new cd. It's a piece for a steel drum orchestra, well, he and I are playing the parts for the recording. Toots is supposed to play on it.

Global warming is boring man. Me a paranoid, knee jerk reactionary, scientific scapegoater? I don't even know what that is, but I live in the northeast and would welcome the tropics up here :-). I'm tired of friggin' winter.

Peace,
Rich

Am I tripping? Are you kidding? You never really come down from acid . . .
wherever you got to on your last trip just becomes the new norm.

Interesting...

The earth's climate has been in a constant state of change for the last
oh....4 billion years or so and somehow we've come along in the
last 50 years and managed to screw it all to hell..

Uh...yea sure.

Say four and a half, although for most of that time you wouldn't have
wanted to be here. You couldn't have survived.

However, for the time humans have been here, the climate has been
remarkably stable compared to those earlier times.

This is partly because of the greenhouse gases that have helped keep the
planet at an average temperature that's conducive to our kind of life.
Which is probably something we should pay attention to and try not to
mess up.

and somehow we've come along in the

Somehow? You should look into how. The science is out there but you have
to get past the political smoke screens.

Warning, it requires learning a little bit about atmospheric chemistry.
Some find that "boring." It's really cool, though.

Heeheh!!!. IIRC, it was a little transparent recangular thing that went by
the street name of "Clearlight".

...errrr....that is, IIRC.....

;))
