Hello Paris Users,

I am offering my Paris gear up for sale. I wanted to post it here first to allow the users here a chance to buy it.

I have moved on to a new system and want to just work in the box in Reaper for ease of use. I want to thank Mike and Kerry, and all the other users who helped me with questions and troubleshooting over several years. If you have questions, ask, they are very knowledgeable about Paris!

I will be requiring payment through paypal and the buyer pays shipping (see my comments below. So the final payment you make to paypal would include the purchase price listed plus the cost of shipping. Payment must be received before the item is shipped). For the items I don't sell here, I will be posting them on ebay soon to allow other buyers to them.

Here are the items I have, Private Message me if you have questions and I'll check the messages every so often:

All items in US dollars.

MEC- Black. 1 Left \$100

This is the Blackface Ensoniq Paris MECs (Modular Expansion Chassis). It was only used occasionally in my home studio. It was working fine when last used, within the last year. It is in very good condition. The power cord and cable to connect to the EDS card are included and were also working fine when last used. The manuals I received with the unit are also included.

Control 16-Black. 2 available. \$75 each

These are the black control 16s for use with an Ensoniq Paris system. They were only used occasionally in my home studio. They were working perfectly when I last used them, within the last year. They are in very good condition. They require a cable to connect it to the EDS card (I believe it is an RJ45) and that is not included.

8 input card Black. 2 available. \$80 each

These are the 8 input expansion cards for installation in the Ensoniq Paris MEC. These are the 24 bit A/D converters. They are in very good condition and work fine.

EDS 1000x: \$100 SOLD

EDS 1000: \$35 SOLD

Mushkin Enhanced Silver Line RAM, model 996770 (2 x 4 GB RAM): \$40

This memory pair was included as part of a computer kit I purchased, but I didn't use it because I wanted four sticks of matched RAM. It is in the original packaging and has never been opened.

Please make sure that this RAM is compatible with your computer before purchasing. Returns will not be accepted due to incompatibility with your system. This model is still available online. If you are interested, look it up online to make sure it is compatible with your system.

Computer: \$40

I do have the computer I was running the paris on so it does have the pci slots. It currently has windows XP Home version 2002, service pack 3, 2 GB of RAM, AMD athlon XP2600+, 1.91 GHZ, a CD ROM and CD burner, Wavelab 4.0 (which could be used to master and burn CD and mp3s) . It ran ok but I would get windows errors regarding "unhandled exception" occasionally, and occasionally errors regarding not enough memory. I tried to add more memory but couldn't get it to run 4 sticks at the same time. It is heavy and in a large case so would be fairly expensive to ship but I would be willing to sell it for a low price, plus the shipping. Let me know if interested. Those of you who know, correct me if I am wrong, but I think you could download Mike Audet's updated drivers for a decent price, along with a pace free version of Paris.

Shipping:

The buyer is responsible for the shipping costs, which vary widely. As an example: I live in the Minneapolis, Minnesota area. To ship the MEC (about 25 to 28 pounds boxed) from my zip code to Beverly Hills, CA was quoted at around \$60. From my zip code to a town in Illinois was \$29. Per UPS, it is based on weight, size, shipping origin and destination (e.g., shipping to a rural area will likely cost more than a central shipping hub in a larger city) and value of the item. If you are very interested in buying an item, private message me with your complete address and I can call UPS or USPS for a shipping estimate based on your location.
