Yeah, I think that was one of his best shows (Jammin' in New York, I think).
Here's another good over-the-top rant from the same show:
<http://www.youtube.com/watch?v=L9Rr0aTB8KI>

Yeah, I liked his analogy of the planet likening it to a "big electron",
woooooo, woooooo, wooooooo, wooooooo; I thought I was the only one who
pictured the solar system as part of a big molecule. What a philosophical
comedian, the dude was deep.

It was the drugs dude. They make you wise. :) (Watch out, here comes Bill
L . . .)

I thought I was. I conceived this notion during a paranoid moment during an acid trip back in the early 70's when I decided that nuclear testing was going to start a interdimentional chain reaction that would eventually cause our sun to explode. Of course, I then proceeded to write it all down and turn it in as a mini thesis for a political science class I was taking at the time.....then I sobered up.

I was embarrassed about this until I saw the last few minutes of Men In Black, which totally vindicated me.
;)

I just figured it out. The universe creates black holes by creating sentient beings, intelligent enough to discover and design technology enabling them spawn a black hole. And POOF, there arises the black hole which gobbles up the associated solar system. I postulate therefore that every black hole which exists in the universe was created by a group of nuclear physicists :-)

Hey, that makes sense! But do we come out the other side intact but in a weird parallel universe?

Wow, I guess we'll have to wait to find out until they're ready to fire up that Hadron particle accellerator full power. Maybe perpendicular rather than parallel.
