If you want to follow the insanity of my virtual audio routing odyssey I offer
up the following link...

noise.youchill.com

Thanks
Chuck

Chuck,
Is it possible to add rewire to PARIS? If so, would rewire over LAN be possible?

respect
Nappy

Hi Nappy,

At this point its not possible to add anything to paris. So I am trying to steal audio from paris via a vst plug, route it to another application and get it back to paris. This will enable paris tracks to stream to any other vst plug capable host.

Thanks Chuck,
Wouldnt it be nice if PARIS had rewire?
My dream.....I'm sleeping,
ID comes out with a new version,actually two versions,the EDS version and
a EMU-Powered version. The EDS version is the PARIS we know of today with
a few addtions. First it drops the MIDI which wasnt useful in the first place,add
rewire which would alow us to use any rewire compatible sequencer and made
it work over LAN. Add ADC and update to VST 3.

The Emu-Powered version would be a native version like PT Le and run on any
of the Emu audio cards which have there on board effects that run in place
of
the EDS effects,but can run with any other native apps..Cubase,Sonar..etc.
Oh
ya,this is a PC only version,but if rewire was it work over LAN a Mac sequencer
could be used. I know I'm dreaming.

respect
Nappy

Chuck,
Would VST to ASIO I/O be an easier build?

Sound cards like the Creamware or Syedc could handle the actual audio I/O

I think the Syedc Mixtreme card would give Paris PDC.

Gene

Chuck,

If you can do that, how much harder is it to have PARIS except streaming audio from another host along with time code?

I hope I'm making myself clear. I'd just like to stream Reason into PARIS on the same machine with out extra hardware or any other sequencer driving some sort vsti's I guess

I'm asking is there any type of plugin that you could write to add a rewire type set-up for PARIS? (Syncing a sequencer and steaming audio to

PARIS insync

respect

Nappy

Rewire would be huge for me)

Hey Nappy,
I've had that same dream verbatim way too many times.. Oh well.
