Will, I'm on 25 years with Paris! Been through a few EDS cards though, Just rebuilt a P4 machine, keep getting error code 2/2 on load up, any ideas? I have not seen that before.

Trying to get a decent Magma chassis so as to migrate to Win 10 newer machine, I have worked on every DAW out there, I still like the Paris sound, thanks Mike Audet!

Cheers,  
Johnny

Just the usual tips.

I would pull each card and use an eraser to clean the PCI slot pins until they are shiny. Double check every cable and cable connection, looking for bent pins on them.

On you mother board make sure you don't have a PCI slot sharing with the video controller. New motherboards seem to do this less and less.

---

Double check you power supply is powerful enough to power the EDS cards.
