Subject: External sends not working

---

I recently upgraded my computer to Windows 7 Pro. I have a three card system. Paris seems to be running great except that the EDS external sends on cards 2 and 3 don't seem to be functioning. Both cards pass audio just fine... I thought it might be a word clock issue but the word clock lights are lit on all three MECs.

I attempted to modify the Paris cfg file to "UseHouseSync=1" but discovered I didn't have permissions. When I modified the permissions of the file to allow me to edit it Paris became unstable. So, I uninstalled and reinstalled and it seems to be OK now with the exception of the external sends on cards 2 and 3...

Anyone else experience this?

Well, I solved it, more or less. The problem was in one of my IF2s that I was using as an effects send.
