
Subject: Ideas for cutom PARIS work desks?

Posted by [kerryg](#) on Mon, 17 Nov 2008 19:28:05 GMT

[View Forum Message](#) <> [Reply to Message](#)

Hey all - I'm tooling up to make some custom furniture for my setup this winter. Over the years I've seen some very cool ideas here for custom PARIS furniture, and I was wondering if anyone had any pics or plans they'd be interested in sharing. I want to go "next generation" with the space, completely dispensing with mixer and using the PARIS rig for routing, monitoring etc. My needs may expand somewhat but I can't see going to a huge number more tracks than I'd have (in my limited space I'd be more likely to get another EDS for more internal processing than, say, more i/o - although a third C16 might eventually be an option).

Basically - two 19" monitors, keyboard/mouse, 2 C16s (possibly leaving room to expand to a third), keyboard controller. Fingertip access to say 10-16 RU worth of gear. No need to provide for MECs or CPUs etc - they'll be tucked away in a nearby machine cupboard (I'm definitely panel-mounting some USB and Firewire jacks for access from the desktop though). I want to keep the width from getting out of hand because the space is only 11.5' across and I don't want to block access to the machine space or back of the desk.

I've started off by buying some basic desk plans from here to get oriented - <http://plans.thefrankes.com/racks/> Although they'd certainly do in a pinch "as is", I'm looking at ways of better customizing the furniture for PARIS functionality and ergonomics, and (hey, may as well start with the wish list and pare it down from that) perhaps giving it more of an "Argosy" kind of vibe - maybe something a bit like the Aura 260-LR in this link (caution, pdf) - http://www.argosyconsole.com/documentation/AURA260_CutSheet.pdf

Anyway, interested in what other folks have done, and what you've found works! Anyone still got functioning links to any of the previous PARIS furniture sites? This might be Wiki material as well.

- Kerry

PS: the speakers will be on separate stands.

Hi Kerry,

Check your email, I just sent you a pic. I didn't want to attach it here as the file was kinda big..

Cheers,

TC

The first thing you have to decide is what to put in front... if it's your keyboard controller, then the C16's and your keyboard / mouse have to go farther away. You could put the keyboard / mouse on a tray under the controller, but then the height of everything else increases (you need leg room). My advice is, figure out a layout that works for you, then design accordingly. You may want to consider putting the controller keyboard on a locking slider... once you get the center section designed, it's easy to put top-load racks on either side.

Attached is a photo of the one I build for our studio.

David.

Ok, I downsized the pic.. thought I'd throw it up here in case the owner is still on this board and can give some details..

I can't remember who's desk this was, but it's pretty cool. From what I remember you can rotate the monitors up or down for a better view of the tracking room when needed..

Cheers,

TC

Hey TC,

Ya that's my desk. I couldn't find a shot so I'm glad you did.
The video monitors are fixed at that position but that's a separate enclosure on wheels. I kept it at a 30 degree angle to eliminate any reflections from the soffit mounted Genelecs. I do use glasses to see the monitors which are 21" and about an arm's length away. I call them my superman glasses.

There are 6 rack spaces above as you can see. Also there are 6 rack spaces off to the far left for the tt patchbay. Most of the rack gear is on either side of the desk. Two racks to the right along with my midi work station. That is now 2 x 22" LCDs with Cubase. Both Paris and Cubase are visible in both locations. Three racks (wooden rail) to the left with mostly compressors. The machine (barely visible to the right) houses the computers, magma and Mecs x 4. It is behind a 5' glass door slider.

I don't actually have the plans to this since it was conceived by me but built by another gentleman. He did some mighty fine work I have to say. It is ergonomically very nice. Low enough that my thighs can touch the bottom of the desk while on my toes.

Tom

It is a sweet desk.. I must have dreamed about it and in that dream the monitor angle rotated.. :)

I think that's pretty much perfect for Paris.. except maybe a bit wider with one more c16 :)

Cheers,

TC

Yup, that's pretty sweet too.

I still think Tom's desk is ideal, it seems like BT's would be maybe a bit tight with the displays being so close.. I sure wouldn't complain though..

Cheers,

TC

TC,

One thing Kerry might consider if he decides to mimic my desk is the resonance the wood cavity creates. I've considered blowing foam into it. There may be a better idea but it does have a pitch of it's own.

TC, you won't need more than one C-16 if the motorized job gets happening!!!

Gantt, you are correct with the monitor angle business. The reality is that many folks ignore that reflection in their environments. They just set up the old LCDs wherever they look best. As long as your mixes translate who cares really.

I've seen that one - it's way cool but I have one comment. I don't think that the flat monitor angle will work well w/ today's LCD screens. I have mine low too but when they get too flat I can't see 'em.

That's an awe-inspiring thing, to be sure. Was that in its "Largest DAW
On The Planet" heyday?

- K

PS: who is Popeye-X? Hardly any of the PARIS links, like the SMPTE,
seem to work any more.

Here is yet another idea for ya Kerry, I am actually modifying the desk a bit as we speak, moving my speakers up, back and in behind the edge of my flat screens. This is an older pic as well, most of the racked stuff is changed around, got all my pres on the right side now and two MECs on the left, different monitors. Sorry about the quality, just a screen grab off my webpage. Contact me if you need better, more detailed pics.

Thanks Aaron,

I think I read the entire thread. I would personally be happy with something that had the same functionality as the c16, but with motorized (pref. touch sensitive) faders, nothing more. That would be quite the breakthrough for Paris. I could honestly care less about using other apps with it, since there's a plethora of options available already. Of course the Paris user market is somewhat small at this point.

Cheers,

TC

By the way, this was a recent update at Doug's ParisFAQs site -

PARIS NEWS

October 2008 Since the economy is supposedly doing so poorly, I thought it was time for me to spend a lot of money! I'm increasing my manufacturing capacity - I've got a verical knee mill on the way, as well as a pneumatic press and a laser etcher! I'm hoping to start production of the motorized fader box in early 2009. (I need to finish the third batch of MB-808 kits and get the first MB-9090 and MB-SEQ kits out the door first.)

Hi Rob,

Yes, I did, thanks! :-) Behind the wood slats is a layer of Ozite, then a *PILE* of insulation where the large soffit monitors and old automation computers and screens used to reside. It makes a really big bass trap that tightened up the response of the room immensely, and greatly improved imaging. There is a large port that you can't see (it's even hard to see standing in the room) top / center that vents hot air from the computer rack on the left. I plumbed a duct from the studio air conditioning into the front of the rack. The cold air goes down inside the glass doors and gets sucked into the computers (Pic #1). The warm air is blown out the back and pressurizes the rack, forcing the hot air out the 10" round vent passively. I added a 2' conduit that is hiding in the center for access to cable a large flat screen monitor should we decide to add one later.

The console was built entirely out of 3/4" MDF... 8 sheets of it. It weighs a ton, but doesn't resonate at all. The three sections of the console sit on two 3" HSS steel tubes, that sit on the pedestals (Pic #2). The pedestals have openings on the back for cables to go up to the console keeping all the cabling out of sight (Pic #3). I made patterns for all the pieces and router cut all the vertical panels from the patterns so everything fit together perfectly (Pic #4). The large hole is for a cable-way between sections, and the small round holes were used with a guide collar to router-drill the side panels so the sections

could be bolted together.

David.

A *big* thanks to you folks who have contributed your designs - some beautiful work there!

This has sparked some interesting thoughts over here - more to come shortly.

- K

That's huge news.. I'm totally in. For me it will be well worth whatever it costs to get motorized faders with paris.

Cheers,

TC

Not sure. I'm a mac guy also, but it made more sense for me at this point to run paris on xp, with the adat drivers etc. that Mike has come up with, as well as the new effects, plus I no longer have a g3 or g4 kicking around to run os9.

Maybe that's something to consider. My pc system was around \$200, with all new parts, (except hard drives that I already had).

Cheers,

TC

I really wish I could have got the Mac plugs working last summer. I literally spent weeks trying to get them to compile with no success at all. I really, really tried. It's something that I'd like to return to someday, but right now, the drivers seem to me to be the biggest contribution I can make with what time I have. I just wasn't getting anywhere with the Mac plugs.

All the best,

Mike

I have to confess to getting close to pulling the trigger on a PC system for Paris. Kerry has me about 80% convinced and flying faders (along w/ Mike's new FX!) could tip the scales. I've also become a bit more PC savvy since doing ebay listings for a shop here in Maryland. I've been working on a Toshiba laptop. It's ain't a Mac but it ain't all bad...

So how do I go about putting together a smokin' Paris PC?

Mac to PC users,

If you spend half as much on a new PC as a new Mac you guys will end up with a smoking PC/Paris/Cubase (insert any DAW) rig. For this scenario I suggest Chris Ludwig all the way. You won't have to learn anything and it will be a mofo comp out of the box.

OTOH you can build your own, dig around for older parts and learn

all the ins/outs of PC building and save lots of money. The time is more important to me these days.

I've built more than a few comps myself but think the knowledge that Chris imparts into your rig is worth every penny not to mention the lifetime support and supplied backup software.

Sincerely,
Tom

Subject: Re: Ideas for custom PARIS work desks? - mac to pc

Posted by [TC](#) on Wed, 19 Nov 2008 20:42:10 GMT

[View Forum Message](#) <> [Reply to Message](#)

Hi Guys,

I can share my experience a bit. First of all, my objective was to keep things bone simple, and use the pc only for paris (I've got 2 mac pro's that will be integrated with it, so I didn't need anything fancy).

My other thought was to go single core Athlon, also to keep things simple. I ended up going on ebay and grabbing a bare bones system consisting of atx case, mobo and cpu, with 1gb of ram.

Specs were:

CPU AMD Athlon 64 LE-1640 AM2 (2.7GHz) 45W 2000MHz FSB

Memory 1 Kingston DDR2 PC2-6400 1GB/800MHz

Motherboard BIOSTAR MCP6P-M2 (NVIDIA GF6150,SATAII,RAID,DDR2-800)

Video NVIDIA GeForce 6150 GPU Memory Share Up to 512MB

Audio Onboard High Definition Audio

Network Card Onboard Network Card

Case G-Power Stylish Deluxe Black Case (9021)

Power Supply 450W ATX Power Supply

These were all brand new parts. Cost was \$144.00. Now, this system only has 2 pci slots and one pcie, so I am using a pcie-pci expansion chassis with 4 eds cards (virtuavia).

I added my own hard drives that were kicking around, and a (new) dual pci video card also from ebay for around \$60 (there's onboard vga, but

that only powers one display).

I just temporarily borrowed the cd rom drive from my mac to install windows xp. I installed the stripped down version of XP, but I have an xp pro license here as well for it (I always like to do things legit as everyone deserves to make a living from their hard work).

That's it. very inexpensive, brand new parts and runs great so far. Very easy to get up and running with paris, and far beyond the systems I've used with Paris in the past. In my opinion, keep it for paris only and keep it dirt simple.

If you need something to run cubase and paris etc, and need anything beyond the basics, then get someone like Chris L to build it for you and save the headaches.

Cheers,

TC

I find Studio B at Digido an interesting setup:

http://digido.com/index.php?option=com_content&view=article&id=12&Itemid=29

<http://www.digido.com/services/the-mix-doctor.html>

I'm guessing you have to spec the LCDs pretty carefully to get a good image at that angle, though.

No problem -- Bob is a great guy and has mastered some of the projects I've worked on. His book is excellent as well.
