Howdy.

I finally got my ADAT card installed and I am trying to route audio directly through the analog inputs to the ADAT outs and into my RME Babyface -> Logic. I'm not sure I have the Paris patchbay set up correctly.

I think I properly configured the patchbay as it should be, I saw a screenshot here that shows how to do it, but I'm getting no signal from Paris into the Babyface, and the Paris ADAT card does not lock. Is there some secret configuration I don't know about? How should Paris be set, to lock to digital? I tried locking the Babyface to Paris but the signal sin't good enough, it keeps fluctuating.

Thankful for any pointers,
Jimmy

Hi Jimmy,

in the manual/description i can't read anything about adat sync. The same problem offers me, as i like to sync a RME 9632 with Paris. There was missing the Adat "Sub 9" Plug and this is important to have "sync" between RME products and Paris. Most RME products will shown with "Adat sync" Logo, tehn it is possible to sync over Adat.

Hope i can help you. (SOrry for bad englisch)

Best regards
Dan !
