I need some help with a headphone mix issue... I've patched aux send 1 and 2 to MEC 3 and 4....
My physical 3 and 4 out go to a furman headphone amp...   I can't seem to get enough gain output
to send to headphones ... in other words the headphones aren't loud enough... I know it's not the
furman because I've connected that to a directout from my board to a mic and it's just fine.... so ...
My aux sends are set for external... I've tried pre p/p and post .... I've messed with the master
sends and returns... ??? doesn't get louder just distorts......What's funny is that during the
session last night we were making something happen then the computer froze and the headphone
mix got louder ...like normal loud .... any ideas out there .... Maybe aux send/pre/post 101...thx
