Here is an interesting new patchbay that's coming out. It's the switchcraft StudioPatch 6425.

Check it out at: <http://switchcraft.com/>

James

the first thing I zeroerd in on was that it is an analog and digital PB and that it can pass phantom power. I've never really thought about phantom powering my digital gear. I see potential for all sorts of experimentation here..

;o)

After watching War Of the Worlds the other night, I have noticed some similarities between the tripods and my DAW. I am thinking that simultaneously sending phantom power to both my analog and digital devices while looping a sample of a foghorn through multiple infinite delay lines, I may be able to actually animate the DAW so that it no longer needs AC.

I'm working on the design for the three legs right now.

<http://drzeus.best.vwh.net/wotw/other/gait/>

I'm pretty sure that if I can get it up and walking, I can get it to do all that other cool stuff too. I have located a big sealed beam flashlight and a high power magnification device and the prototype death ray looks promising. I just need to finish the surface mount.

;o)

glad to see you're on the right track again and not just testing half

baked ideas...
