Hey Folks,

A project I recently produced and recorded in PARIS can be previewed online - Link below.
I didn't record tracks 1 and 10

Best,
Lance

Sounds wonderful

Nice space on the kit...what was it if I may ask

Hi Don,

It's a Slingerland kit.
Some tracks use the drummers snare, some use my snare since I thought his was a little thin and "ringgy"
All processing is in the box paris eds verbs etc.

Thanks for the feedback.
Appreciated!!

Lance

Nice recording !
Drums have punch and are clear ! everything is heard , no masking whatsoever.
Can you tell us if you used something specific like compressors and where ?
Did you put any compressor or nolimit? at the stereo end ?
Did you use any vst/dx effects or just eds ?
Congrats.
Dimitrios

Wow, nice work, Lance! Drums pop nicely, everything sounds warm and big and still nicely dynamic and "real". Kudos!

Nice feel, solid performance, great production.

Way to go.

Who's singing?

Ted

Thanks so much for the feedback guys.
The band I recorded is called "Mouth of Wilson".
The vocalist is Chris Arland. We're all in the Mercer County / Princeton area of NJ.
This is their third or fourth album and they we're very prepared.
That made a big difference in the outcome and for the drums in particular.

The project was mastered by a friend of the band in Wavelab using EQ, C4, L1 / Ultra., and that's about it.

Dimitrios;

There's very little if any compression in my recordings.

Only as an occasional limiter etc. I just keep telling clients "It's all in the fingers, let's make it work." Even with the vocalist, although I did a lot of word by word gain re-writes on some lead vocal tracks.

For transparency; I have Paris Eq high band pass on nearly every channel including the kick drum. I raise the gain on the Paris Eq about to +5 on the kick drum channels (2) Shure beta 52 and Shure beta 91.

Once the mixes are done, I insert no limit on the master bus to simulate ultramaximiser and hear how the reverbs will translate later on in mastering. Then it gets turned off.

On occasion, I insert "Freak Q" on the master bus to add gain. Thing is, over the past few years I've become much better at getting the gain right at the pre's. I don't cut anything "hot" anymore - I push the mixer faders.

The pre's are all Prosonus - 1 M80 8ch, and 1 digimax 8ch using the Paris converters 24 x 48.

I can't thank you guys enough for the help over the years. I've been using PARIS since 1999 and I've needed help from the forum community since the day I installed it..

Thanks again! and rock on,
Lance Reichert
