I have bought a Universal Audio Quad now. But i don't still recieved it these days. So i have parting out some Paris Parts. I like to use only 16 Channels from Paris.  
Is it possible to run Plugs from the Apollo Quad into Paris ?

Daniel,

I am thinking about doing this as well. It should be possible but you will need to figure out delay compensation manually. I am looking at doing this and handling delay through faderworks ([http://www.vertexdsp.com/products\\_faderworks.html](http://www.vertexdsp.com/products_faderworks.html)). Interesting way to get UAD into Paris though (I have an apollo quad as well). Might even want to use the apollo for inbound signals to take advantage of their preamp plugs (i.e. 1073 preamp emulation).

Glad to help. I am excited to get my rig up this next month. Just picked up a magma card to connect my magma chassis to my i7 laptop, then setup the paris to Apollo connections. Should be fun.
