Hi All,

Here's the reverb as is. I didn't get a chance to remove the debug code, so you'll have to place the "reverb.log" file in c:\. If you have any trouble, at least you can send me the log. :)

I've found a way to do multiple pages, so I'll get that going as soon as I can.

Let me know what you think!

Mike

What did you do to it Mike? I may have missed your post on this.

Hi Cujo,

This was a reverb called "The Big Reverb" that was commented out of the original PARIS stock effects. It had a bug in it that caused it to freeze PARIS when it loaded that I fixed. There was no GUI with it, hence the crappy UI that I am still working on.

It's nice. 16 stereo early reflections plus a nice, big reverb.

Let me know what you think.

Mike

Hey Mike,
You got my last donation right ?
I am waiting to see what you will come up for a simplified parameters reverb...

Regarding the other DP plugz please take a look of any guitar cabinet/distortion plugin as this is much needed here at least !!

Keep up the great work !!

Regards,
Dimitrios

Hi Dimitrios,

Thanks for the kind words and the financial help!

I am very excited about getting to work on the dp-pro stuff. I think I'd like to get the multiband compressor working first, but I'd be happy to tackle the guitar amp after that.

I'm sorry things have been moving more slowly than they were. I just started a teaching job, and it's been a bit intense. But, not to worry - development will continue until there are no more algos to port. Even then, I bought a book on dsp programming, and I'd like to do a phase linear eq someday.

I'm pretty sure that I'm going to keep all the controls, but put them on two separate pages. It won;t be long now until it's done.

All the best!

Mike

AMP SIM???

I'd sell my left testicle to donate toward that one!!

Nice work, Mike.

What if he just did a different GUI - one that had all the basic parameters you'd normally want, and then a button that says "more" or "advanced", and when you clicked on that, the window would drop down or expand to reveal all the rest of them. Heck, with all the parameters he's talking about he could do a three-stage drop down... "more", "still even more", and "super-tweakers only" lol

I tried putting some of these plugs in my XP Paris OS, and some of them don't show up. Any idea why? They all showed up fine in my ME OS.

Should it work on Mac? If so, where do I install it? I put it in: System folder -> Ensoniq -> Plugins and also just in the Ensoniq folder but it didn't appear in Paris.

Hi Carl,

Try adding your plugins folder to your windows path. That seems to clear it up. I'll post an updated ini file in the next few days if you'd rather wait. I have an idea about what it could be.

All the best,

Mike

Hi Gnatt,

These are Windows only plugs. Chuck is going to send me his development Mac, and I'll compile them for the Mac then.

All the best,

Mike

Is that different from pasting them into my system32/Ensoniq/Plugins folder?

That's what I'm doing....

Hi Carl,

Here's a link to a website that describes how to add a directory to the Windows path:

<http://www.computerhope.com/issues/ch000549.htm>

just add the full path to your windows\system32\ensoniq\plugins folder to it.

Let me know how it goes.

Mike

does the log file go in the same place as the dll and ini?
