Subject: "UseHouseSync=1" and Word Clock

Hi Folks-

I'm using an Apogee Big Ben for wordclock-ing my system. What is the benefit of
pasting the "UseHouseSync=1" command into the paris.cfg file?

Is this a PC only directive, or is it relevant to Macs as well?

Currently I'm on Mac but planning to migrate to PC this fall. So far, with OS9, I've just been
selecting "Word Clock" on the Project page, and it seems to be working fine.

TIA

Ted

Hey Ted,

The "house sync" line is for use with 3 or more interfaces. Has to do with clock timing between
interfaces I beleive. You can use a full 8 cards and as long as you don't have more than two
intefaces, you don't need to add the house sync line.

Dave
