Thanks guys, its now working great. I could not get it working with the nvidia geforce2 video card - some type of resource hogging(not IRQ). With the EDS card out video worked great. I tried the EDS in slots 2 and 3, but video would lose resolution with an error message that it couldn't find enough resources. Tried a Matrox G450 and no problem. Paris installed and runs fine. I did switch HDs to a clone I had, so not sure what the loss of video problem was yet on the other drive. I have a newer nvidia geforce 6200 though that I need to work so I can use my 20" digital monitor (1680x1050), which lets me get the whole mixer on screen. x

Edna
