Hi everyone,

I'm looking for Paris coponents, to complete my station.

if anyone's got:

- 1 MEC
- 1 8in card
- 1 8out card

even maybe 442,

I am definitely TAKING IT!

it's urgent, it's scratching me, it's tickling me!

2 MECs
3 442
Patch bays
Magma PCI expansion with 6 EDS cards

Make an offer. Not sure what they're worth.
Merci
Ron

At least a million bucks!

Now, as to how much you can actually sell them for...

I'll check tonight when I get home. Also, wonder if u could help. I just built a windows 64 bit computer and Mikes new driver. I'm trying to use 2 EDS cards in the computer so I can use two C16 s side by side so I can mix without using submix. I'm trying a cracked version of Paris 3.0 and it seems to work except it says you EDS cards aren't configured properly. I know I have to find which is the A card and daisy chain them per the manual. Also connecting the 10 pin word clock. Any ideas to make this easier. By the way not to worried about the cracked 3.0 after talking to Adrian over at intelligent devices.

Also I've added 2x8 in cards and 1x8 out card to the MEC. It doesn't seem to be recognizing the in cards. I vaguely remember someone saying they had the same issue and moved slots. Any ideas here?

Magma pc113r sound right?

Ron

Yeah, nice, that's the big Magma. I've got a couple of them myself. Looks like one went on ebay for 60 Quid recently. (About a hundred bucks I think...) Sigh...

BTW, do I count eight cards in there?

Looks like The is still asking a decent price for PARIS stuff, \$250 per card, \$200 for MECs, \$150 for C-16:

<http://thesoniq.com/Sale.html>

It would be interesting to see how many sales he's had recently...

EDIT: I've been primarily a Mac guy, so I'm not sure about the Windows stuff. If you've got two cards in your case, the one set of ribbons cables should make an "X". I don't remember having any problems with the location of 8in cards, but that doesn't really mean much either, especially now that I'm a bit older...
