Without getting into details we have discovered out two MOTU 828's will no longer sync via firewire.

Were looking at buying an RME 9652 to get the audio from the two MOTU converters and a presonus digimax into the computer vial lightpipe

Question is will the master wordclock in the 9652 be able to sync the two MOTUs and the Digimax or will I need to get a master wordclock OR a wordclock splitter / distribution amp box .

If anyone is familiar with this please contact me at dnafe@rogers.com ASAP because this little glitch caught us totally unprepared and as these converters are central to our studio's operation we need a fix ASAP

Thanks

Don,

I just got a 9652 for my setup. I don't know much about what it can or cannot do, but you're welcome to bring your Motu & digimax to my place and see if they will sync from the 9652's clock.

Cheers

Kris

Hi Kris

According to tech support at RME / MOTU and Presonus they will sync via BNC wordclock possibly without a WC splitter / generator...but more importantly they will also sync via ADAT optical so need for word clock.

Halleluya there is a digital god

hehehe
