Hey - are there any PARIS Mac OS9 users here? There have been several revisions to libsndfile, the library that virtually all modern PC, Linux and Mac OSX apps use to support PAF, and some of them seem to have tweaked PAF compatibility. I'd like to test and see if our old pal the "24 bit PAF rendered from PARIS Mac" bug is still with us. And if it is, I'd like to see if Matthias' Reaper-PAF extension, which has internal settings to change the "endian-ness" (don't ask, but it's the thing that broke it up til now), has now given us a workaround.

If you're a PARIS Mac OS9 user and you'd like to help, I could use a couple of small (two or three second) 24 bit PAF files rendered directly out from PARIS Mac OS9 to test with. Feel free to attach them here, and thanks in advance!
