e. in that the gas power plant provides

> the electricity; a smaller generator and a larger ele. motor

I thought they did, and to be honest, I can't think of any reason why they would work any other way. I guess that shows how much I know about this. I did see some commercial the other day for something that recharged the battery every time the brakes were applied. I thought this to be rather strange.....charging a battery on the downside of the motion. I guess this might be a good thing for city driving though, since the brakes are un use a lot. Not so good for highway driving. We need these engines on the big long haul trucks too.

;oP
