Hi Guys,

Sorry I've been slow adding to this. I'm just buried in work.

My motherboard is a Gigabyte GA-MA790GP-DS4H with 8 GB of Kingston DDR2 1066 RAM and an AMD 95 watt 1055t CPU. I'm using the Virtua Via ATX kit expansion chassis. My OS is Windows 7 Professional 64 bit edition.

I've tested the driver with 4 cards, but there is no reason that I know of that it will not work with 8. I'd be happy to help troubleshoot and fix any issues that come up. The biggest thing would be having interfaces on at least every other card.

All the best!

Mike
