we had to resurrect an old job today (first of a few) and although it meant i had to dig a very old g4 out of storage then install os9 on one disk and osx on the other it was lovely to see paris all over again. i miss the simple things (like zero latency monitoring).

sniff

Hi Max
How are you???
Great to hear from you after such a long time.
Studio still going gangbusters??

hi martin

yes, things are going pretty well here. two studios running with nuendo4.
going to upgrade to mac pros this summer, just waiting for the leopard dust
to settle.

it was funny yesterday running an audio app and an operating system very

responsively on a machine with 128mb of ram. it just seems almost unthinkable now.

what *was* very interesting was that the new intdevices site (was getting the email address for a authorisation response) shows that they have some audio stuff 'coming soon'.

how are things with you?
