My take on it is that the HD system just doesn't make that much sense as computers get faster and faster. Once you go native, Steinber just kicks PT LE's butt as far as functionality and ability to integrate with the latest/greatest.....YMMV.

Hi,

I see all of the folks who are moving off Paris seem to be moving somewhere other than Protools. Why? Price? Sound? I'm getting ready to make the move and am strongly considering PT. Thoughts?

I'm on PT HD2 here.

I love it. With plugins like Phoenix and others that are available now, it sounds great. I'm going to be testing out the Fulcrum summing box shortly also with my API's.

I also have Logic 7, DP5 and have used Cubase SX before, but for me for audio work and ease of use, PT is pretty hard to beat. It's midi is lacking, but I'm getting more used to it.

It's nice to have the card DSP plus the native dsp combined.

Cheers,

TC

Dave,

If you can afford a DIGI DSP based system (HD3?), then I would do it. Native, there are better options, as DJ pointed out.

Er . . . excuse my technical deficit, but what do you mean by "go native"?

Mainly, I've been wise to the Digi upgrade game for too long and I don't do a daily production routine anymore to give Avid any more of my \$\$\$\$. Paris is still doing tonally what I need of it, and a 2nd native system covers the workflow deficits.

To go native:

.....to use a DAW platform that depends on the native processing power of the computer only rather than using onboard DSP processing power as in Pro Tools, or Paris.

I have also *gone native* whilst living in the tropics amongst the indigenous peoples of southern Mexico and central America.....the adoption of regional dress, language and cuisine was pretty easy to handle and but I eventually wussed out because to go *completely* native would eventually have led to converting to Catholicism.

What kind of converters would you use for that? Hopefully not Behringer..

Talk about hellfire.. (ba doom boom..) :-)

Cheers,

TC

You will have a similar experience if you choose to move to New Jersey.

I haven't seriously tried to work with Pro Tools for probably two versions or so, but last time I checked the MIDI was a miserable pig compared to either SX or Sonar.

Perhaps you are making some headways with going native... the average bear won't be able to do this... unless it is pre-built. I mean, look at troubles one goes through with DSP board systems like Paris. By going native, you are opening up a can of worms... Just my opinion and I'll stick to non-native... With the sound snf stability you get right out of the box

with a system like Paris -or- PT, plus with the sonic sound... it would take the front line of the Colts to convince me otherwise...

I bought a PT 002R and I'm just now digging into it. I know there are better sounding formats, but in Nashville PT is king. I got it just to try to stay in the game.

CL
