HI All

Well after a year and a half I finally got my second rig up and running and am going to attempt to get Paris and CEPro 1.2 / Wavelab 4.0 synced.

I have SPDIF / ADAT and Light pipe all wired up and have audio playback from both CEP and Wavelab happening in Paris....now it's time to attempt syncing the second rig to Paris and then eventually Paris to the second rig.

So the big question is where do I start.

DOn

Not having much luck...had a partial sync with CEPro but lost it.

Help

Don

Sync? what are you trying to sync?

David.

Hey Dave

Got CEPro Working...had to enable sample sync and also midi channel 1...this is good, confusing but good

Now for some really dumb Q's

How do you set up the patchbay to route audio out the ADAT down the lightpipe

same question for SPDIF?

No rush as I'm still messing with things here...

So, by "sync", do you mean when you press play on Paris, CEP and WL follow along? Or, are you referring to "clocking" both computers for audio transfer without clicks and pops?

David.

Right now hit play and both comps lock. - Working

Have audio coming into Paris using ADAT module - Working

Need to know Patchbay set up in Paris for ADAT and SPDIF use - reading and experimenting

Need to know routing in Dakota for the same - reading and experimenting
