Thanks guys, its now working great. I could not get it working with the
nvidia geforce2 video card - some type of resource hogging(not IRQ). With
the EDS card out video worked great. I tried the EDS in slots 2 and 3, but
video would lose resolution with an error message that it couldn't find
enough resources. Tried a Matrox G450 and no problem. Paris installed and
runs fine. I did switch HDs to a clone I had, so not sure what the loss of
video problem was yet on the other drive. I have a newer nvidia geforce
6200 though that I need to work so I can use my 20" digital monitor
(1680x1050), which lets me get the whole mixer on screen. x
Edna

If you have installed any matrox driver be SURE to annihilate them down to a
generic 16 color windows driver before you try to install any other video
card.

I didn't install a driver, it came from WXP. I'll check and see if it is a
Matrox driver and replace it with the generic if so.

Thanks

OH, btw when I closed Paris I got an unhandled exception error/crash for
Paris. Any Idea what this is?
New one for me.
