Kim,  
I like both Neil and Michael's suggestions. Fenders  
have a cleaner sound which is often good to help  
retain the keyboards clarity. I know with the Vox ToneLab  
and with Nigel I usually end up with the matching cabs  
to the given amp. I try them all and almost always go  
with what was sold with the head. They are matched.

I used to have a Vox AC-30 and a Marshall 4 x 12... ehhh.  
A Dual Showman through the same Marshall... ewww.  
Put those amps with their soul mate cabs and wow!  
The old 100 Marshall sounded sweet with the cab though.

Use your ears. Boogie gets a great clean sound almost=20  
like a Fender but rounder. Might be another option to try.  
Tom

Could you rip stuff off a commercial CD then burn a new one  
maybe?Haven't tried that yet.

PeteSo I've read a number of people saying Turtlewax,Pledge,Vaseline,  
toothpaste.Any of those things really work?

Pete

Rod,

Really? I thought I had a problem with that once...

Maybe not. I can probably do this now then.

Thanks!

Tom

"Rod Lincoln" <rlincoln@kc.rr.com> wrote in message =

Lou,

Me too. I wish AES would look at my schedule before  
they choose theirs.

There's always next year.

Tom

-----\_NextPart\_000\_00C3\_01C5CE91.D6072760--Thanks heaps guys. That's really helpful. I'll  
be busy doing some testing  
tonight. :o)

Cheers,

Kim.

I did have a problem with that!

Thanks Dave,  
Tom

I want to build my own footswitch for my keyboards for sustain. My idea was to have one momentary footswitch which acts like a normal sustain pedal, and one locking switch for each keyboard, so that if I was to have a big bass not or key pad which sustains while I add atmospheric bits over the top, I don't have to hold my foot down... and then hopefully wire it so that the momentary switch also momentarily releases the locking switch... so if I want to change bass notes I just press the momentary momentarily ;o) and play the new bass note and it will still be locked on sustain, if that makes sense.

Problem is I thought it would be easy to build, but I can't find momentary footswitches. All I need is some momentary switches like the one pictured and it will all be easy! I've been googling high and low... I'm ready to import them if I have to.

Anyone got any clues where I might get such a thing?

Cheers,  
Kim.

---=\_linux434c4a6f--I want to install Paris 3.0 on a Mac G4 I just bought. Will installing the Paris 3.0 update that I downloaded from the Internet years ago do the trick by itself? Or do I need to install Paris 1.55, then Paris 1.8, and then Paris 3.0? Anybody know?

Thanks,  
Richard Faylor

The above question is key at this moment, but there may be a few other questions as the process continues:

1. Will authorization be required via the Internet? If so, at what point and where do I go for it?
2. If Paris 1.55 and 1.8 have to be installed prior to Paris 3.0, I unfortunately have them only in floppy form. (I never obtained the CD version.) This means I'll have to copy the data on the original floppies to my old G3 which has a floppy drive and copy them to a CD(s) that I can then load into the G4. Since the original 1.55 version came on two copies, will I need to make two CDs so that I can insert the second when the prompt appears saying, "Please install the second disk"?
3. Is it possible, at this late date, to obtain the official Paris 3.0 software CD that I failed to obtain years ago?

Many thanks. You can install Paris 3 on its own. Indeed the installer says you should uninstall previous versions, however this is not required (you can run a previous version side by side with 3 as it has a different install path).

Authorisation can be done via email. You get 7 days from install to get your Pace key authorised, which is done at support@intdevices.com

You can still buy version 3 from Morgan at East Coast music mall, but if you have the downloaded one and a license allocated to you I can hardly see

the point. I don't believe the disk offers anything that the download doesn't.

Cheers,  
Kim.

>Many thanks. No, you didn't...seriously. I've imported several 24 bit stereo interleaved  
waves for a project tonight. No problem at all.  
Maybe you didn't strip the files. If they're broadcast wav

waves for a project tonight. No problem at all.  
Maybe you didn't strip the files. If they're broadcast waves (most are these  
days) you need to do that.

Was this a Paris session? Would love to hear it!!

TyroneAgreed, Paris all the way.

Rod,

I think you nailed it. I didn't strip the 24bit jobs.

So that was the problem for sure.

Tom

"Rod Lincoln" <rlincoln@kc.rr.com> wrote in message =

news:434c6a48@linux...

No, you didn't...seriously. I've imported several 24 bit stereo =  
interleaved

waves for a project tonight. No problem at all.

Maybe you didn't strip the files. If they're broadcast waves (most are =  
these

days) you need to do that.

Rod

\*Boogie gets a great clean sound almost=20  
like a Fender but rounder.\*

IIRC, Boogie started out it's life as a hot rodded fender.

AA

"Tom Bruhl" <arpégio@comcast.net> wrote in message =  
news:434bfd77@linux...

Kim,

I like both Neil and Michael's suggestions. Fenders  
have a cleaner sound which is often good to help  
retain the keyboards clarity. I know with the Vox ToneLab  
and with Nigel I usually end up with the matching cabs  
to the given amp. I try them all and almost always go  
with what was sold with the head. They are matched.

I used to have a Vox AC-30 and a Marshall 4 x 12... ehhh.  
A Dual Showman through the same Marshall... ewww.  
Put those amps with their soul mate cabs and wow!  
The old 100 Marshall sounded sweet with the cab though.

Use your ears. Boogie gets a great clean sound almost=20  
like a Fender but rounder. Might be another option to try.

Tom

"michael bliss" <mbliss1@austin.rr.com> wrote in message =  
news:434bec45\$1@linux...

Neil has some great suggestions already.  
The Fender Twin was the amp used with the rhodes, thus  
also sounds good on the Wurli. Also, try the Vox AC30 on the Wurli.

As far as B3's go, as Neil said, go with the Bassman or some=20  
big ol' bass cabinet such as the ampeg.=20  
Let us know what you end up using, and what sounded best.

michael bliss

W, the Korg G4 is a fabulous Leslie simulator.  
>About 300 bucks on eBay. It's the best I have tried...

I'm actually very impressed by the Leslie emulation on the GNX4. I had a bit of a fiddle last night with making some sounds. I hooked up by Behringer FCB1010 so that one of the controller pedals controls the speed of the leslie. Wonderfully the Leslie refuses to adjust speed instantly. If you start from the slowest speed and ramp straight up to full speed on the pedal, it takes quite a few seconds for the Leslie to actually speed up, just like a real one would. There are various parameters I'm yet to fiddle with which I'm pretty confident will yeild an even better sound. Currently the pitch shift is such that it is difficult to recognise an actual note when the Leslie is at top speed, but there are a number of tweaks I can do, and I'm sure I'll find the right setting. The trick is that the top modulation speed needs to be jjjjust the right intensity so that the note is still obvious, but only just. ;o) Last night I was having too much fun playing to spend enough time tweaking. ;o) I'm having a ball!

Cheers,

DC,

Sounds like you like it even more than you did before.

I have been at odds using a Vox Tonelab on the gig.

It has millions of amps and effects but ... one compressor  
that is average to poor in my opinion. Like you say,  
it sucks the life out of the sound almost always.

I might give that bad boy a try since it's not too much  
scratch

>Tom

Oh yeah. And I generally hate pedals.

We always wrestle with compressors for guitar live. It's hard to get=20  
the compression we want without the life all going out of the music.

I have a pair of DBX 160 VU's that come close to the sound I=20  
want if I keep the ratio really low. Close, but not perfect.

What I have always wanted to hear is the trick we do in the studio=20  
where we mult the return (on tape) or copy the track (in a DAW) and=20  
squeeze one track and don't squeeze the other. Play with the=20  
relative levels a bit, and maybe some EQ and you can get some  
sterling tones. (btw, this is not panned left and right, this is a =  
mono

effect I am speaking of) I used to use my Carl Martin compressor  
this way by using the 4 inputs on a Matchless DC-30. Run the  
guitar into the high gain input, then run a shorty from the low-gain  
input on the same channel to the compressor, then run the comp

out to the other channel in. This got the signal to both channels,=20 one side compressed and one not compressed. I got some great tones, but it was pretty cumbersome to setup and adjusting the volume got pretty involved...

The Barber Tone Press, does it all in one box. You get volume, blend, and compression. What I do is run the blend up to full=20 compressor and then adjust the compressor knob until I am hearing quite a bit of squeeze going on, and then pull the blend back until I get just the right amount of uncompressed tone going through.

Sounds flippin' amazing. I generally leave it on all the time.

BTW, this thing really helps heavy music, it's are not just for=20 country like a lot of people think compressors are for live. With the Tone Press you can make even metal sounds much more=20 massive and study.

Works equally well on all my guitars and all my amps. Even the=20 Hiwatt, and that thing hates pedals.

Oh, and it's 139.00... Get one. You won't believe it.

- 1) What did you use to analyze it?
- 2) How did you know what to do to fix problems?
- 3) What did you do to fix the problems?

I guess Im wondering if it is worth it to buy an analyzer like the Rane RA27 or something - or - would I be better off just learning my room as is. It works really nice in front of my Digitech modeler too.
