Cheers,  
Kim.....so what? How could a simple thing like needing a new place to live  
ever compete with rampant gearlust?

;o)

>ever compete with rampant gearlust?

Well it's not that simple you see. I mean sure, I could just live on the  
street with all my gear under a tarp, no problem at all...

....but they don't do broadband internet with static IP's to cardboard boxes  
in your local park down here, and hence I wouldn't be able to host the newsgroup

any more, and that, of course, would mean not only would I not know what to buy any more, but I wouldn't get nearly enough encouragement to buy things that I don't really need, plus I would have nobody to gloat to when I buy things! ;o)

Hence, while choosing gear above a place to live my seem a simple choice, in my case there are a few more complications. ;o)

I've just found out that work may have an opportunity for me to finish the day in Seymour on Friday, which is two hours towards Sydney, and I would probably be able to finish about 3pm, which means I could be there that night...

....and get back Saturday. :o)

Cheers,  
Kim.

Cheers,  
Kim.....so that's the plan eh? Sounds like you've worked it  
ou

>Hi,

I'm a long time member here - although more a lurker than anything else. I still run an rock steady Paris setup on my old PII-350 with Win98SE, and read the newsgroups daily.

Anyway, I'm involved in a computer support start-up and would love your feedback on some proposed logos for the new business. The name is GeekMobile

and I've setup a quick poll at the address below. There's no sign up of any kind required. Just 5 logos inside one small gif, and a voting box with corresponding numbers 1 to 5.

It'll literally take a few seconds to give me your input. So much appreciated if you do!

Thanks

--

Best,

Pete Alecl believe he is a PARIS user and has posted to this group.

Dubya

I would have been thrilled.

I do, however, have a decent Aardvark WC and a second Ardsync DA distributor.

My next project is to buy Zaolla connectors, which I've found a great price dealer on eBay; and pair them with Canare cable.

card we have is pre-DSP and does not have total mix capability. This would make low latency monitoring virtually impossible, so I could only do this for sessions where overdubs or headphones are not used. Once we get the DM2K installed, I will definitely be giving this a go... kinda curious myself.

David.
