hi all,

now that i'm using my PARIS system regularly once again (1EDS1000/824b i/o on a single G4 800), i have a system question i never fully addressed:

Would it be best to:

1) run the OS/startup and PARIS app on my superfast IBM SCSI 10k rpm drive and record audio on 7500 ATA internal and external FW drives or

2) vice versa?

thanks,

lucio
