Just reconfiguring a slumbering full Paris system -
Still wanting to use Paris for the foreseeable future.

Wondering about the pro's and cons of using PCI cards.
Thinking about picking up a used TC Powercore...

Anyone experienced with that or is there a better alternative?

PS - I have a mac 1.25 with 2gb of ram

The G4 1.25GHz should work fine. I cant remember for sure if the TC Powercore works, but I think it does.

James

James, thanks for the reply -- anyone happen to know if the TC Powercore is a better alternative than the UAD, performance and latency-wise?
