Hey Chuck,  
Cool !  
Music has saved many a life for sure :)

haha.

After trying to figure out how to start a musical diary, I copped on way  
to late to the blog revolution and started using an incredible piece of open  
source software known as wordpress.

youchill.com is where I will post bit by bit, for better or for worse, every  
song I have ever recorded, along with some details. I decided to do this  
after speaking with one of my oldest friends one night, and agreeing that,  
even though it is a terrible cliché, that music literally saved our lives

:~)

I don't really have any new music per se as all i do now is noodle around on the piano, while computers crash, hard drives die, and plugins get de-authorized under mysterious circumstances. Everything I will post is circa 99 or earlier.

I guess most of what I record could be considered alternative music, because I can't sing and I can't play. haha But I do think that there are bits and pieces of obviously recognizable influences.

Chuck

that's some nice stuff Chuck. I definitely hear some influencing going on,  
one sounded very Doors and I just dug it man.

Keep posting them, I'm listening as I work on figuring out this Pulsar thang...

Hey Aaron, if you need some help figuring out the Pulsar stuff  
tonite, gimme a call: 915-FIVE-EIGHT-FIVE-3806, I might be able

to walk you through some stuff... I'm doing some VERY tedious drum editing right now and could use an excuse to take a break LOL!

So WHICH card did you get? Did you pick up an older one (I noticed your other post... less DSP's and an older software pack?)?

Neil

less DSP's and an older software  
> pack?)?

Yup, that's exactly what I did. It's the Pulsar II I think. I got it in the interests of testing it's summing and some synth action, and if I really like it I'll get a newer card. The latency on this older one is higher, but for this purpose I really didn't care. If I get a newer one to go with it, the latency will then drop to the newer one's settings.  
Something you might wanna note Neil is that using this and the 3.1 software, 88200 shows up as an option in the sampling rate.

Should you decide to pull a DeeJ try to bend it to the point of breaking,  
here's the old software: )

Yeah after the first debacle wherein I tried to run the card on the same Machine as my Cubase rig, the "rep" checked with Creamware & mentioned that on older versions of the software, it reported 88.2k as an option... I asked him: "well, then how about seeing if they can send me one of THOSE verisons?", and there was some issue with that - perhaps it wouldn't work with the new hardware or something like that; so I then I pointed out that if their idea of moving forward was to drop a samplerate that some people DO use, but keep a samplerate like 32k that nobody on the planet uses anymore, then that's not very encouraging, either. lol

OHHHHHHHHHHHHHHHHHH MY!

Now THAT is tempting... very tempting. <wiping drool from chin>

Now that I have this thing working in my second DAW rig, though (the one that also has Paris on it), I dunno if I want to yank it outta there & install it back in my Cubase PC just to "see" if that software version would work with this newer card. The possibilities are intriguing, though... summing ALL channels in a project as opposed to just 4 stereo submixes... and doing it in one box instead of two - ASIO signal routing vs lightpipe... hmmmmm.

Part of me wants to leave well enough alone, since I'm happy with what this doing for me now, but part of me wants to give this a shot. Not sure if I should push my luck LOL.

Neil
