Hey gang, been a while since I've hung out. Hope all is well. I am still an avid Paris user and have a question. On occasion, I will receive an error message within the editor window (honestly cannot recall the actual message), but from that point forward, I can no longer see the data I recorded on that track (or any other on that SubMix)....you do see blank data fields where tracks were previously recorded.

Initially I freaked out, as I could not see the data, but soon noticed that I could drag the data to another SubMix editor window and continue working. Once this happens though, the aforementioned SubMix editor is useless. As

to know what causes this and the possible fix to use the offending SubMix.

Any thoughts...anyone?

Thanks!

Tyrone C

I think something like this happened to me once or twice. Somehow the "show waveform" toggled to = off.

Lance, this worked!...and I'm quite embassed to say I never thought of it
myslef...lol

Thanks!
