Anandtech puts two quad cores inside a Mac and reports performance v. normal Core Duos.

<http://anandtech.com/mac/showdoc.aspx?i=2832&p=6>

I'm a littl surprised this worked at all. There's also comparisons to a 'benchmark' XP system which finds interesting results.

Surprise surprise, multithreaded 3D tests show by far the biggest performance boost. Those apps work a lot like a well written audio app. Hmmmm . . .
