Subject: Windows 8.1 updates
Posted by Richard Kelley on Tue, 08 Sep 2015 00:20:45 GMT

I have been on 64bit windows 8.1 for a good year now. Ok weird stuff, at first it was ROCK solid for quite a while. Then I got some issues when I was doing multiple gain changes, sometimes I got an assertion thing happening, but still worked for hours with no problems. Then lately after booting up, the computer might sit for a couple of minutes and then go into a hibernation type thing restart work for hours. No settings were on sleep or hibernate. Then sometimes I would load first project and Paris would stop responding on first play of project. Close down reopen, go for hours. I just a bunch of the 8,1 updates, twice in two days, reboot, all problems, knock on wood, are gone ! I have been working for days and hours in the last three days, NO problems !! Hope I don't jinx myself. So my point for all this blah blah, is just to let he community know that 8.1 works great! Lots of Rham ! One just has to do the updates. Don't have a clue why it was so solid and then got a little kooky ! but after the updates all is well again. Paris Rocks on 64bit windows 8.1
