View Forum Message <> Reply to Message

It wasn't a lot and it didn't stick, but it happened. Sept 9th is as early as I've ever seen it happen here. I've seen it happen in the middle of October and that is considered pretty rare.

It's cold outside tonight. I've been trying to find a couple of cords of oak firewood today. It's going to be a long winter, it seems.

Deej

Dang, and all we get is 105 degrees and smog...

post a pic if you took one

DC

The aspens are already starting to light up a little here. In a couple of
weeks it's gonna be psychedelic.

;o)

Up here in Maine: no snow yet. But, the nights are definately getting colder, and the sun is down by 7pm. I must admit with all the rain we've had this summer I'm looking forward to a colorful fall. At least in my experience, lots of water often translates into neon trees.

 Ah, I love snow, one thing I miss about living in the middle of nowhere =
(eastern Montana). Snow is a rare treat here in Portland.

Wow.....that looks cooooollllldddd!!! Brrrrrrr!!!!. It's beautiful here
today. the leaves are really starting to turn. The blooming sagebrush is
iridescent gold and the aspens are starting to go psychedelic.

;o)

If you like winter, here's a shot I took earlier this year... :-)

David.

Shifts in overall weather patterns are consistent with global warming.
Deej's Durango dusting may or may not have much to do with it, though.

If Al Gore is not your cup of tea, try the National Academy of Sciences:

 http://www4.nationalacademies.org/onpi/webextra.nsf/44bf87db

Global warming is the measurable rise in overall average temperature we
are currently experiencing. Don't be confused by local anomolies which
may or may not be related to global warming.

Here's an introduction from the EPA you may find useful:

 http://yosemite.epa.gov/oar/globalwarming.nsf/content/index. html

late 19th century. Warming has occurred in both the northern and
southern hemispheres, and over the oceans. Confirmation of 20th-century
global warming is further substantiated by melting glaciers, decreased
snow cover in the northern hemisphere and even warming below ground."

Read more about global warming.

There's a difference between local weekly weather forecasts and overall
climate trends.

Global warming is happening now. We know this by looking at historical data.

The National Academy of Sciences, EPA and other science based sources
can fill you in on what we know so far, and how we know what we know.

It's worth reading for yourself.

The data goes back hundreds of thousands of years via ice core samples
and other historical evidence.

Don't get hung up on Al Gore or the blather from talk radio/cable TV. Go
straight to the science.

I haven't been an Al Gore fan necessarily, but I agree on the global warming
theory and am glad he's promoting awareness. Now if we can just get Detroit
and the oil companies to actually try to help...

It probably isn't so much a theory any more as an observation - one I'm not
sure I want to see through to it's logical conclusion.

Snow on Pike's Peak the last two days. We were up there Sunday - a balmy 38
degrees.

Regards,
Dedric

Ahhh, so then you DO beleive in the fact that there is evidence
of various other warming & cooling cycles throughout history!

Not that I thnk we should continue to dump pollutants & CO2
into the atmosphere if we can avoid it, but I think its safe to
say that if we went back to the horse & buggy days & replaced
every car, bus & train in the US with the equivalent amount of
horses needed to provide adequate transportation for our
current population of 300,000,000 people, the methane those horses would
produce would probably cause more "greenhouse
effect" than all the motor vehicles currently on the roads here.

How many horses would you need? 150 Million for personal use,
maybe (about 1.5 per household on the average)? Plus horses for
public transportation (how many horses would it take to pull the
equivalent of a city bus's worth of people? A train's worth?
A 737's worth? Then since most forms of mass transportation
runs 24 hours, you'd need to triple or maybe quadruple that
number for that sector, because while a plane can work 24 hours
in a row for however many flights/hours until it needs it's
required maintenance checks, a horse sure can't.

Yep, the internal combustion engine needs to go - to be
replaced with about 400-to-500-million horses, each producing
about 20 pounds of manure per day. The total area of the US is
a little over 3,500,000 square miles, so this works out to about
140 horses per square mile... hmmm, wait a minute, that's too
many horses to be able to grow food for, considering that not
all of that area is pastureland; plus, we're looking at about
10 Billion pounds of manure produced per day... I wonder if 10
Billion pounds of manure would produce as much methane (which
is 20 times more potent than CO2 as far as "greenhouse gasses"
go) as the amount of pollutants that our motor vehicles do?

Then, since we can't grow enough food for all the horses, we'd
soon become slaves to HOPEC (Horse Oats Producing Eastern
Countries), and in no time, we'd be at war with Australia over
more land to grow oats on.

Damn, we Americans can't get ANYTHING right, can we?

:)

Hey Neil,

Climate variation throughout history is well accepted. For example, ice ages have come and gone, leaving clear evidence.

So if you've heard anyone discussing past climate changes as if it were in dispute by the scientific community, that would be a good example of jousting at a straw man. Straw man distractions are usually used when arguments cannot be won on their merits. There's a lot of that straw man stuff out there in the global warming discussion, some of it apparently funded by industries with a short term (and short sighted) financial stake in denial (such as is documented here: http://www.exxonsecrets.org).

Setting up the idea of horses as a sole solution to global warming and then knocking that notion down would be another straw man argument. I haven't heard anyone in the scientific community advocating a return to horses and buggies. That's a funny rant, though. :^)

If you'd like to get a quick overview of what some scientists actually are proposing as possible solutions, go to the library or newsstand and read the current issue of Scientific American: "Energy's Future Beyond Carbon."

The entire issue is dedicated to possible approaches to the current global warming situation. It covers a variety of attainable options, each with its own set of positives and negatives. They mention 15 "wedge" possibilities, of which seven would be necessary to offset the carbon problem - if we start now. If we don't start now it looks like the choices get progressively more difficult and the chance of success diminishes.

http://www.sciam.com

As you would guess, a combination of approaches is our best bet. The sooner we get going the more we might be able to keep global warming from becoming significantly more severe.

BTW, Colorado is a center for climate research. Here are links to some
of the folks involved around here:

  cires.colorado.edu
  instaar.colorado.edu
  lasp.colorado.edu/science/atmospheric
  www.ucar.edu/research/climate
  nicl.usgs.gov
  www.noaa.gov/climate.html
  nsidc.org

Cheers,
  -Jamie

......and if we weren't using fossil fuels for heat and power, there would be
no trees on this planet by now and this would have happened long ago because
trees convert CO2 to oxygen. the problem isn't fossuil fuels. The problem is
that there are wayyyyyy to many of "us".

Using fossil fuels has given us a long list advantages and dependencies.
It's obvious we're not going to suddenly stop using fossil fuels.

But relatively recently we've also begun to realize they are a releaser
of stored carbon and thus a contributor to greenhouse gases. And we've
begun to realize that's not a good thing given the current atmospheric
chemistry.

The problem isn't any one greenhouse gas source but all of them
together. Any workable solution will involve a combination of actions to
reduce and mitigate potential carbon overloads.

You're absolutely right that widespread use of open flame tree burning
for energy wouldn't be a solution. There might be room for efficient
burning of some plant matter in recirculating, low emmission systems,
but not if it involves extensive deforestation. We need forests to
absorb carbon.

Our people population is what it is and ideas for solutions have to
start where we are. The Sept. Scientific American issue does a pretty
good job of laying out some of the more possible options. Worth reading.

Cheers,
 -Jamie

Call me crazy, or call me faithful...

yes, we need to do our best to be good stewards of the earth we live on...

but, there is a God who set all that exists in motion. One of these days,
He will put an end to the old heaven and earth, and He will bring about a
new heaven and earth (Revelation 21:1). I hope to see this come about in my
lifetime.

In the meantime, I'll continue to recycle, and I've promised myself that
I'll never buy another gasoline burning automobile. But I doubt that the 4
goats I own are contributing to farting us out of existance.

Peace and love,
Chris Latham

BTW, I just set up a myspace account. Please visit,

Nice looking goats, Chris!

It's encouraging to see theological interpretations that support shared

---

environmental responsibility.

I can see no scriptural basis that would justify mucking up the planet on the off chance the world might end before the consequences kick in.

I was just reading about a church that upgraded to solar electric and a geothermal heating/cooling system. Good stewards indeed.

Cheers,
 -Jamie

Cuuuutttteeee!!!!   I can't let my wife see thos goats or she will have to have some....of course, then the doggies and horses would have some extra playmates. Knowing us, the goats would end up living in the house in the winter because if they were outside, the poor things would be cold.

;o}

Well, you can go with horses, or, you can always buy one of these:

 http://money.cnn.com/2006/09/14/news/companies/segway/index. htm?cnn=yes

:)

.....or these.......

http://www.teslamotors.com/index.php?js_enabled=1

Now *that's what I call environmentalism!!!

;o)
