And the first thing is not to fat-finger while typing and put an empty post up...

sheesh

Anyway, (and please don't mistake this for Apple boosterism, I have no interest in that)

I discovered this week (some of you probably figured this out years ago) that the iPod Classic will accept full-size WAV or AIFF files (no compression at all of any kind) and play them.

Ok, so here is what I did. I bought one. Updated the mini's OS (required by the iPod) Then, I imported CD's as 44.1/16 bit AIFF files, using iTunes, and was rewarded with nice big (750 or so Meg) files. Good so far. Then I synced them over to the iPod, and indeed they took up the same amount of space, so there was no compression done there.

And dang! I am playing redbook audio, in real time, on an iPod!

Plays perfectly. Ok, now lose the earbuds. Get the Sennheiser HD580's and hey! it drives them just fine!

Now, the first thing I listened to was the Telarc release of Faure's Requiem, and holy cow it sounds spectacular! No loss at all.

And it occurs to me, that we indeed do have a very hi-fi high-density and portable music playback system here. No mp3, no AAC, no Apple lossless, no nothing. Just CD audio and the ipod sounds as good or better than my Adcom CD player.

And actually, without the laser reading a bunch of pits or burns and the CD player's error correction going on, this may even sound better.

So, I wondering, is there an spdif digital out somewhere on the pins of the iPod connector down there?

Wouldn't it be fun to put a killer D-A on one of these little guys?

hmmmm

At any rate, I am now a bigtime iPod supporter.

Listening to Debussy right now, and some Nat Cole a few minutes ago...

Amazing.

Ok, let me try being a little more articulate.

I came up in recording in the 1970's. Pros have a different attitude than consumers about gear. Gear is a tool. We are not loyal to brands, despite being loyal to an obsolete DAW.

Big fights about gear are for consumers, not pros, and are bad form in the extreme.

We care about Jobs and Gates exactly as much as they care for us. Zero... We care about Apple vs. PC as much as those companies care about audio pros. Next to zero.

In short, I want nothing to do with these mac vs pc fights.

They suck, they're silly, and they're boring.

Being boring is unforgiveable.

So let's give the damn platform wars a break willya?

Just a thought.

Just kidding around dude! Glad your enjoying your iPod. I hope to own an iPod one day. I own a Creative MuVo, it's a piece.

But seriously, do oyu guys realize that we now have a player (iPod Classic 160G) that can hold more than 200 CD's of totally uncompressed audio?

There is now no reason ro not get one. None at all.

Also, there is really no reason for CD's anymore, other than the fact that to get uncompressed audio down most of the isp's we use would simply take too long. That will change too.

Amazing.

Boy am I glad I ripped my entire CD collection to uncompressed .wav files instead of some other format.

I can't imagine ripping 400 CDs again!

I had been an iPod critic up to this latest release... to me, the models with the type of storage I wanted were WAY too expensive...

when the new "classic" came out I just couldn't pass up the 80g for \$250 price point... it finally became a sexy piece of gear...

so... the day after they came out, I purchased one...

I must say... I have run some uncompressed disks over to it, as well as some MP3... it really does sound fabulous uncompressed..and in the environment to which I use it... damn near as good compressed... .

I usually listen to it in my truck.. if I am listening to something critical... it is not through headphones, it is not in the car... it is off of my media PC direct into my system... it has all same stuff that the iPod now has (plus a ton more) ... the killer app. for me was the opportunity to leave all my CD's in the cases, in the rack... never to be touched (everything is already on the media pc)... no more cd cases cluttering up the truck... just that cute little chrome backed beauty in its clip on my dash... and a wire going

straight into the CD changer input on my car stereo....

its been a lot of fun to see what comes up next on shuffle...

Yeah, it's like the first time I made a phone call from a moving car...

"I can't believe I'm doing this".

Listening to totally uncompressed music on an iPod...

Now, you only get 100 CD's or so on the 80G model, but that is plenty for me...

If you use the lossless compression you could fit roughly twice as many  
CDs. Just in case you ever need to add more than 100...

Cheers,  
-Jamie

I use FLAC encoding for most of my CD rips. Depends on the material but usually the file size is cut nearly in half. Better than nothing.
