The free classic delay is really great. Just pick the slapback setting and add reverb / comp from another plug. This slapback effect is really nice.  
:-)

Hey John, that's my favorite delay plugin period. How they have this and the other cool free plugins is amazing. I think they are doing this Free thing because they want to show off to the so-called big guns that you don;t have to charge a mint to get quality plugins.

Another thing, I like the simple interface. My other free plugins from kjaerhus are:

- Compressor
- Chorus
- Verb
- Phaser

You should check out the slapback of the UAD-1 Roland space Echo Emulation. It's about as classic as they get. Very cool.

Not that the free one isn't.....I'm just sayin'.....

;o)

The Classic Chorus has the best Rhodes chorus out there. I use it ALL the time.

Bought it the day it came out. I still use the PSP 84 more than any other delay but that one is nice for sure. Always wish it had a little more attitude, but it's awfully close to a really NICE SE.
