I got my Paris rig up and running on an XP Media Center computer (ASUS = A8M2N-LA, Athlon 64 3500+, 200GB, 512MB, Compaq SR2032X). I copied a = project over to the new computer and everything seemed fine. After that = I ripped some trax off an accompaniment CD to try and record something = and make sure everything worked ok. I ripped them using Sound Forge 7.0 = (just like I always did on my other computer) and I made sure the "save = metadata with file" button was uncheck because I think I remember that = causing me some problems in the past. Then when I try to import the = ripped music into Paris I get an error. Then if you look in my record = director there will be 2 .paf files (even if I set it to default to = ..wav). If I try to import these into Paris you can hear the files but = Paris thinks they are 30 minutes long each. This would not be that big = of a deal but I want it working right.

Anyone have any ideas?

Thanks,

--=20

Erick Kent
