Then check manual to make sure paris cards are NOT in shared slots.
Then you can turn things back on and see what irq's they give up. I'm
in win98 and the EDS cards get IRQ 3 everytime as long as everything
else is off. I use only a sound card on the MB and an ethernet card to
do the rest.

>I'm aware that's it's been posted about not clicking on assertion failed messages until you save as, but I got one this morning, and just for kicks I kept going, ignoring the message.I went for about an hourrecording on Paris, with the assertion message sitting on the middle of the screen. (no clients present, obvioulsy)switching windows, dragging 14 tracks of drums to and from jails....while playing, recording new takes, saveing, save as, etc. Only when I tried to "delete last take" did it lock up on me. I had to close out the assertion window. Only then did Paris crash, as I expected. I'm just posting this finding in case this ever happens during a magic take, or whatever, just let it go. When you can, do a save as, for safety, then click on the message and reboot. I kind of felt like Kramer when he tested the limits of the gas tank. Living on the edge.

:~)

Rodyeah,...just say no...;o)
