Subject: Little bit more data about new Yammy/Cubase hardware
Posted by Bill L on Fri, 28 Mar 2008 12:49:57 GMT

http://www.sonicstate.com/news/shownews.cfm?newsid=6286

Apparently what they have done is duplicated some of the systems in
Cubase within the hardware.

Well, this is esentialy dedicated "hardware" for a native DAW. That's not
so-native if you use these units..Hummmm??

so.. they are going down the road that all of us were gnashing our teeth for...
oooh... 10 years ago... best of both worlds... native portability... with
hardware power back at the home base....

if only, if only....

I think they (Steinberg/Yamaha) new that the only wayto achieve real Zero
Latency was to use "Dedicated" Hardware.

I see no problem with that. Now, those super duper CPUs can take on the task
of providing mega watt power to all those cool native plugins..

It's funny, but Paris (Ensoniq/ID) had this vision way back in 1997!! Yikes..
Best of all worlds.
