So, I have Paris working on windows 10. Three cards, seems stable but the solo button doesn't work. It lights up but has no effect. Anyone else have this happen?

OK, so this is weird... Solo seems to work on other projects, so I figured the project file was corrupted... I created a new project and recreated it by importing the files and get no playback on card 2 but solo works... So, I made a second attempt and now I get playback on card two but solo doesn't work... I'm thinking the .paf files may be corrupted however, they playback in Wavelab... I may try converting them to .wav and then Stripwaving them and re-importing them... Hmmm...

Hi,

i am back, at Paris with other issues. Wich Paris Software/ Asio Host are you using ?

Best regards
Dan

I'm on version 3. I got the solo button issue resolved... I have the PARIS ASIO installed but my sound card is EMU so I have that one as well. My issue now is that I don't have external effects sends on cards 2 and 3... Thinking it might be a timecode issue. I have a Lucid external clock but maybe a bad BNC cable? I dunno, it would seem if it were a timecode issue though I would be getting other error messages. perhaps I should recheck the ribbon cables...

So, the problem was in the .cfg file USEHOUSESYNC= was set to "0" instead of "1". All happy now.. :d
