Hi guys...

I'm sure that many of you around here would not have ever seen a post from me... truth is I have been a long time Paris user, but since upgrading our studio a year ago I've kind of slipped out of "Paris land". I have spent almost 10 years enjoying everything there was about Paris, and constantly rebuilding machines and tweaking config files to get way more out of my system that was probably even possible! I pretty much learned from scratch how to be an engineer not only from the millions of hours i have spent locked in my studio with Paris, but more importantly from so *many* great engineers and fellow Paris users around here who were always too obliging in sharing their tips and experience.

There are too many people to list (and most of them aren't around here anymore), but guys like Brian T, DeeJ, Rick, derek, Matt, Sakis etc have all shared stuff that was invaluable to my engineering... one trip from Australia to Nashville i left some files unrendered on a drive at home, and Brian T was only too happy to open his studio so i could re-bounce them which totally saved my butt! Chuck, i know you're still around here from time to time... thanks a million for allowing me to test plugins (for a short time at least!), and for listening to me crap on about a million ideas every time i emailed. Also... Matthew Craig is probably long gone, but that guy did some legendary programming stuff too! Also... Edmund and SSC (RIP), thanks for having the guts to dream up a system that was really so ahead of its time.

Thanks to all you guys who have in some way inputted in to my life... Never let your technology get in the way of your creativity.

I've just posted some gear for sale on the FS newsgroup... I know at one stage our system was one of the biggest around (and i think holds the Australian record for biggest Paris rig ever!) 5 cards, 4 MEC's, 442, IF2's, stacks of I/O's and 5x C16's... kicked any PT rig we knew of for a LONG time! If you're interested in any of it, check out the post over there.

Thanks to all of you for many years of friendship, learning and a darn good time!

Henry (manic)

You're not dying are ya? So what format are you going to/on? We are in other forums too you know ;-)
We can find you. hehe

Manic,

Good to hear from you. Hope you'll still pop by once in a while.

You're in Melbourne now aren't you? Drop me a line at my email if you feel like catching up at any point.

If we don't cross paths again, all the best.

Cheers,
Kim.

Hi Henry,
Great to hear from you - I have fond memories
of getting your multiple MEC setup , up
and running :)

What system are you using presently ?

Morgan

Hey Morgan!

Gee... i knew i shouldn't have started dropping names coz i knew i'd start missing people like yourself! Ahhh.. the memories of word clocking and international express shipping still give me shivers ;-)

We are actually running a PT HD3 rig, but our real joy is an SSL G console that we picked up. PT is basically there as a tape machine and for editing, but we do all our mixing now on the SSL (except for the occasional ruff demo) and I'm loving it. It was funny how much of the automation in Paris actually came from the "SSL way" of doing things which was kinda cool.

We are presently running a bunch of 192's, but i'd like eventually to get some Apogeos or something. Still, it sounds *way* better than PT did even a few years ago, and i'm glad i had Paris for as long as i did. To be honest, i actually though of using Paris in the same way, but the older OS and the lack of editing features in paris compared to where PT has evolved was just too much of a deal for me. That plus the fact that almost every other studio we have anything to do with is running PT, so it just made sense.

Glad to see you're still around here helping folks out!

Henry

Hey manic,
Good luck in your adventures. I hope you'll stop by now and again.
Peace,
MR

Hullo Henry,

Good to hear from you. I have moved to a different platform as well. Don't be a stranger.

;o)
