DJ and other Paris users,

After contacting again Faderworks author about PDC although he did not refuse to work on a REAL PDC plugin program for Paris !! he is not sure if enough people would buy that !

Instead he promised to update faderworks with this brilliant idea !!!

There will be an extra latency page where we will be ble to put every plugin with its name and latency (typed from the bginning) meaning that you will have to do thia once and type for all your vst/dx and eds plugins their latencies (VSTSPY can detect vst latencies for you !) and have a ON/OFF button on each of them.

So verytime you put a plugin, for instance UAD1 nigel then you just push the ON button and every other Paris audio track will align with Nigel !!!

Isn't that wonderful ?

Hey DJ jump back on Paris with us...

We need your input !

Please support the Faderworks plugin and you that you have no bought this please do so as this is them most important VST plugin ever for all us Paris users.

It does not only have this latency compensation we all were hoping for but it is a 32 group maker for Paris !!! with mute, volume and panning whole groups across submixes !!!

If you happen to buy Faderworks as to show our gratitude that this author is paying attention to our needs when NO OTHER daw user would benefit anymore then this is the least we can do to show our appreciattion !!

Thank for reading

Dimitrios

Now where's my damn latency list?

:~)

Don, so this is a fix as far as delaying tracks to achieve audible accuracy relative to one another but you still have the issue of the audio that you hear not lining up with the displayed waveform in the editor, correct?

Thanks

Rob

Dimitrios,

I own Faderworks and will commend the man who is responsible for this upgrade path!

A very nice development indeed!

Tom

I believe you are correct butso far that has not been a problem for me when

editing tracks

I qualify that by saying I don't have any UAD plugs that have huge latency issues (yet)
