Just a quick comment in response to the "what next" - I have one suggestion to make:

If the PARIS driver could appear as an ASIO host then it could communicate with a program like "Jack" and pass audio to and from other applications without the need for an additional sound card to stream Adat (for example).

I don't know how much additional work that would be, but seeing as Jack already exists, maybe it would not be so much work.

Obviously being able to natively access Paris via some kind of Reaper extension would also be awesome, but I wonder if this might be a quicker result?
