TC M300

I'm wondering what you guys think of this unit? I'm thinking about grabbing one for the TC reverbs.

Thanks  
James

A freind of mine just A/B'ed one aganst the D2000 and told me that the reverbs sounded identical. This guy is a classical guitarist with an extremely critical ear for reverb FWIW.

Thanks Dj!

I sure hope they are good sounding verbs. Their blowing new ones out for \$150.00 now. For the money, and being 24bit, with SP/DIF, I think it might work great with Paris for a quick dial up reverb. There is a new TC M350 coming out. I think the difference is the M350 comes with software to use it like a VST or DX plugin.

It sound pretty good. I use it live and the delays are great. I have used it occasionally on a mix and it's pretty nice.

It's quick and easy to dial in...spdif in/out is pretty handy too.
