It will work fine. I have done this with various preamps. It works nicely for pumping up preamps that are neutral sounding and/or pres don't have a lot of output gain (gives a whole new attitude to a Mackie VLZ or a Great River) Just set the VC1 to receive line input.

I was pondering trying to use the VC1's compressor section only while usig
a different mic pre.

has anyone tried this?

If so, how did it work out?

There are balanced line I/O on the back of the unit. They are XLR. This unit is one of the true sleepers. Used to cost around \$1k. Can be had cheap these days (around \$350.00) on EBay. It's got a nice vibe to it. I like the preamp on acoustic guitar and it works nicely on the Neumann U87 for some reason. It somehow deals nicely with the midrange honk of this mic in a way that more expensive preamps don't. I think it's because of the elves.

I am thinking of trying an BAE 312 into it for just a hint of compression.
Is there a balnced line input on the back? Or would I go XLR?
I can fool around and figure it out, but I have a rock vocal session today,
and I don't want to 'ice the kicker" fiddling around.
Thanks again MR DJ

im with DJ on this being a sleeper unit. I bought one back in the 90's when they were new (cost about \$950). I had just received it when I was doing a Dirt Band record, and put it right on Jimmy Ibbotson's vocal (with a U67). I was just dialing in the levels when he asked me what I was doing to his voice. I asked why, and he said it was the best he had ever heard his voice back in the phones. Needless to say, I taped down the knobs and off we went.

I still use it a lot on a mono smashed room mic, and with a lot of electric guitars...

You were supposed to send that VC1 back to me once you tried it out!

;0P
