Hi all, Have a question. I haven't worked with Paris in a long time but recently pulled out some old 4-track stuff and transferred to Paris to mix. I was working on some panning automation and somehow have done something so that the panning automation screen (shift E) won't show the full 100%L and 100%R. At the start of the project it was there as I manually put some hard 100%left/right pans in there.

I was wondering if anyone knows what I've done and how to go back to full 100% scale. Right now the max L/R pan I can put in is +-25.

thanks for any ideas.

Shane

You have to zoom out (automation vertical zoom) There are separate zoom controls for waveform display and for the automation data itself.

David.

Use the vertical zoom tool in the automation editor - it's right next to the horizontal zoom tool. Zoom it all the way out.

rock on,
-Carl

I figured out what was going on. I gotta use the magnifying glass button
and the `_right_` mouse button to zoom the scale out...

Which is to the right & down a bit from the bilateral adjacency
of the Diagonal Zoom tool...

....but only if you're on acid or on a Mac, I can't figure out
which.

:D
