Whoa.....

I think I just wet myself.

pab

Me too.

You need a sunken monitor bay in your table for that so it does not impede speakers. I have my desk modified so the monitors sit about 7" below the top surface. I hear a really big improvement in the stereo field when there is nothing in between the speaks. Actually, with that one you might be able to mount it on the far wall and avoid all issues with near fields.

It needs better resolution and it needs to be an LCD, not a rear projector
